

Python Code: Traffic & Obstacle Check

```
distance = 15
traffic_light = "red"

if traffic_light == "red":
    print("Car Stop")

elif distance < 10:
    print("Obstacle detected - Apply Brake")

elif distance < 30:
    print("Obstacle nearby - Slow Down")

else:
    print("Road is clear - Move Forward")
```
